### DETAILED ACTION

1. Restriction is the practice of requiring an applicant to elect a single claimed invention for examination when two or more independent or distinct inventions are claimed in an application. **The applicant will have 30 days to submit a reply to the restriction electing an invention to which the claims will be restricted.** Claims drawn to the not elected inventions are withdrawn from consideration by the examiner. Divisional applications, which claim the restricted inventions, may be filed and shall be entitled to the filing date of the original application, see Manual of Patent Examining Procedure (MPEP) Chapter 201.06. A detailed description of restriction practice may be found in the MPEP Chapter 800.

#### *Election/Restrictions*

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1, 5, 6 and 11, drawn to a system for recording a video and transmitting said video via a real-time broadcast or the Internet, classified in class 725, subclass 109.
  - II. Claims 2, 7 and 12, drawn to a system for translating video recordings, classified in class 704, subclass 2.
  - III. Claim 3, drawn to a real-time birth and death counter, classified in class 715, subclass 700.
  - IV. Claim 4, drawn to a video time capsule system, classified in class 707, subclass 102.

- V. Claim 8, drawn to a chat room system, classified in class 709, subclass 223.
- VI. Claim 9, drawn to a mall and auction system, classified in class 705, subclass 80.
- VII. Claim 10, drawn to a system for accessing the Internet via a cellular phone, classified in class 455, subclass 422.1.
- VIII. Claim 13, drawn to a system providing news and current events, classified in class 725, subclass 51.
- IX. Claims 14-16, drawn to a system providing access to a multimedia archive, classified in class 725, subclass 86.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I, II, III, IV, V, VI, VII, VIII and IX are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable.

In the instant case, subcombination I has separate utility such as distributing video via a broadcast system.

In the instant case, subcombination II has separate utility such as translating video being played back from local storage, such as a DVD.

In the instant case, subcombination III has separate utility such as providing a graphical user interface.

In the instant case, subcombination IV has separate utility such as creating and maintaining a database.

In the instant case, subcombination V has separate utility such as providing peer-to-peer communication.

In the instant case, subcombination VI has separate utility such as providing a shopping interface.

In the instant case, subcombination VII has separate utility such as wireless remote access to a network.

In the instant case, subcombination VIII has separate utility such as distributing information via a network.

In the instant case, subcombination IX has separate utility such as providing multimedia on demand.

See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
